Professional Summary

Passionate Full Stack Developer with 1.5+ years of experience building scalable, high-performance web applications. Specialist in modern fullstack development with hands-on expertise in TypeScript, Next.js, React.js, Node.js, and Django. Successfully delivered over 5 production-ready projects, focusing on clean architecture, secure authentication, and complex thirdparty API integrations.

Core Skills

Frontend: React.js, Next.js, TypeScript, Redux Toolkit, RTK Query, Tailwind CSS, ShadCN

Backend: NestJS, Express.js, Django REST Framework, GraphQL/REST.

Databases & Caching: PostgreSQL, MongoDB, SQL, Redis, TypeORM.

AI & Integrations: ChatGPT API, Gemini API, OpenRouter, Stripe, Twilio, Square, QuickBooks, Zoho API's.

Languages: TypeScript, Python, Node.js, JavaScript, PHP.

Experience

Software Engineer

May 2025 — Present

Scaylar Technologies

- Developed and launched 4+ production-ready projects, including 2 Django/Next.js and 1 NestJS/Next.js application built from scratch and one with Express with Graphql and Next JS.
- Integrated AI-powered functionalities across multiple platforms using ChatGPT, Gemini, and OpenRouter APIs.
- Implemented complex third-party integrations for payments (Stripe, Square), accounting (QuickBooks, Zoho), and communication (Twilio).
- Designed clean, efficient architectures and APIs to support high performance business workflows.
- Optimized system performance by designing complex database schemas and implementing Redis caching to ensure high-speed data retrieval and seamless user experiences.

Associate Software Engineer

Dec 2024 — May 2025

Micro Data Tech Solutions,

- Worked as a MERN Stack Developer, gaining experience in multiple projects.
- Worked with relational and non-relational databases to manage data efficiently.
- Utilized React Query for efficient data fetching and state management.
- Implemented Redis Cache for optimizing performance and reducing load times
- Developed backend solutions using Node.js and Express.js and typescript

Projects

Greeta.ai (Self-Serve SaaS Platform)

Developed Greeta.ai, an automated SaaS platform that enables businesses to instantly generate professional AI phone audio, including IVR prompts and on-hold music. I engineered a robust NestJS backend integrated with the ElevenLabs API for high-quality voice synthesis and utilized FFmpeg for server-side audio processing and watermarking. To support enterprise-level workflows, I implemented a complex role-based access control (RBAC) system—spanning organization, project, and folder levels—alongside a credit-based billing architecture powered by Stripe. The platform features a high-performance Next.js 14 frontend with Zustand for state management, ensuring a seamless experience for script generation, audio previewing, and secure delivery via AWS S3 signed URLs.

Tech Stack: NestJS, Next.js, PostgreSQL (TypeORM), TypeScript, ElevenLabs API, AWS S3, FFmpeg, Stripe, and Redis.

FranFinance — Signarama

Production Grade financial app named FranFinance, a specialized financial platform designed for Signarama franchises to securely integrate accounting data. I engineered secure OAuth pipelines to connect QuickBooks and Xero accounts, enabling the automated retrieval and processing of complex financial statements. By designing a scalable MongoDB architecture and a React/Next.js dashboard, I provided management with the ability to compare performance across locations and identify growth opportunities. Additionally, I integrated AI-driven insights to transform raw transaction data into actionable recommendations, significantly improving financial oversight and operational decision-making for the franchise network.

Tech Stack: Node.js, Express.js, MongoDB, GraphQL, Next.js, QuickBooks/Xero APIs, OAuth, and OpenAI Integration.

ScanShield — Roof Inspection

Developed ScanShield, a specialized roof inspection and appointment management system designed to streamline data collection for canvassers and inspectors. I integrated Google Maps for precise geolocation-based home identification and implemented the Zoho Appointment Booking and CRM APIs to automate inspection scheduling based on site coordinates. To modernize the reporting process, I engineered a pipeline that utilizes the OpenRouter API to analyze inspector-uploaded photos, automatically generating detailed, AI-powered PDF reports on roof damage. This end-to-end automation significantly reduced manual documentation effort and improved the accuracy of financial and structural insights for clients.

Tech Stack: NestJS, Next.js, PostgreSQL, OpenRouter API, Google Maps API, and Zoho CRM/Booking APIs, AWS S3,

Education

Bachelor of Science in Computer Science

University of South Asia

CGPA – 2.98

2020 – 2024
